

# Assignment 1b: Initial Group Brainstorming

Between now and the next class meeting on October 18th, your group should have at least two brainstorming sessions. During these sessions, each group should outline some research questions as well as short- and long-term goals for the semester. You may consider the following questions:

- What tools are required to improve the architectural/structural design process?
- How can particle-spring systems be used for design and analysis in architecture?
- How could your group extend the existing "Gaudi" applet?
- Additionally, you may pose your own questions to answer.

Each group will make a 10 minute presentation on Oct 18th, summarizing your discussions and proposing possible research avenues for the remainder of the semester. You may want to try implementing some of your ideas in Processing to illustrate your concepts. We are available to answer questions by email and to meet with your group if you would like more input.
