

**Scientific American Update
Preparation #2**

- Track down and read a recent (2011 or later) review article that covers new research on a key topic within the earlier magazine article. Be sure that it is a “review article” not a just a research report. Read at least two more journal articles (probably from the list of studies covered by the review article) that focus on the particular area of research that interests you. Pubmed (accessed through MIT’s library site) is the best resource for tracking down articles.
- List the key advances and/or changes in orientation reported in your review article.
- Write up a two-sentence synopsis of each of the additional journal articles.
- Post exercise on class site. Bring copies of your articles to class.
