

CONTENTS

PART I FLUID MOTIONS

Chapter 1 INTRODUCTION	2
The nature of fluids	2
Pressure	3
Viscosity	10
Diffusion	15
Viscosity as a diffusion coefficient	17
Chapter 2 FLOW PAST A SPHERE I: DIMENSIONAL; ANALYSIS, REYNOLDS NUMBERS, AND FROUDE NUMBERS	19
Introduction	19
Which variables are important?	20
Some dimensional reasoning, and its consequences	21
How to construct dimensionless variables	25
What if you choose the wrong variables?	25
“Dimensional analysis”	31
Significance of Reynolds numbers and Froude numbers	32
Conclusion	34
Chapter 3 FLOW PAST A SPHERE II: STOKES’ LAW, THE BERNOULLI EQUATION, TURBULENCE, BOUNDARY LAYERS, FLOW SEPARATION	35
Introduction	35
The Navier–Stokes equation	35
Flow past a sphere at low Reynolds numbers	36
Inviscid flow	40
The Bernoulli equation	43
Turbulence	48
Boundary layers	58
Flow separation	65
Flow past a sphere at high Reynolds numbers	70
Settling of spheres	74
Chapter 4 FLOW IN PIPES AND CHANNELS	83
Introduction	83
Laminar flow down an inclined plane	84
Turbulent flow in pipes and channels: initial material	91
Turbulent shear stress	93
The turbulence closure problem	98
Structure of turbulent boundary layers	99
Flow resistance	103
Velocity profiles	115
Coherent structures in turbulent shear flow	149
Chapter 5 OPEN-CHANNEL FLOW	157
Introduction	157
Two practical problems	159
Uniform flow	160
Energy in open-channel flow	164

The hydraulic jump	172
Hydraulic regimes of open-channel flow	176
Gradually varied flow	178
Chapter 6 OSCILLATORY FLOW	184
Introduction	184
The nature of waves	184
Water motions due to waves	187
Wave boundary layers	190
Combined flow (waves plus current)	194
Chapter 7 FLOW IN ROTATING ENVIRONMENTS	201
Introduction	201
Playing on a rotating table	201
The Coriolis effect on the Earth's surface	205
The Rossby number	212
Inertia currents	213
The Ekman spiral	215
Geostrophic motion	220
Ekman layers	227
Planetary boundary layers	230

PART II SEDIMENT TRANSPORT

Chapter 8 SEDIMENTS, VARIABLES, FLUMES	237
Introduction	237
Sediment	238
Hydrodynamic perspective	241
Particle motions vs. turbulence	242
Observing sediment transport	245
Variables	246
Flumes	254
Chapter 9 THRESHOLD OF MOVEMENT	260
Introduction	260
Forces on bed particles	260
Balance of forces	265
Dimensional analysis	267
How is the threshold for movement identified?	269
Representations of the movement threshold	272
Recasting the Shields diagram	275
The Hjulstrøm diagram	278
Chapter 10 MOVEMENT OF SEDIMENT BY WATER FLOWS	285
Introduction	285
The bed, the flow, and the load	286
Transport mode vs. flow intensity	289
Bed load	294
Suspension in a shear flow: the diffusional theory of suspension	307
The effect of acceleration of gravity	314
Chapter 11 MOVEMENT OF SEDIMENT BY THE WIND	320

Introduction	320
Saltation	321
Chapter 12 BED CONFIGURATIONS	350
Introduction	350
Unidirectional-flow bed configurations	352
Oscillatory-flow and combined-flow bed configurations	419
Wind ripples	431
Eolian dunes	432
Chapter 13 THE SEDIMENT TRANSPORT RATE	445
Introduction	445
The sediment load and the sediment transport rate	445
Predicting the sediment transport rate	450
Chapter 14 MIXED-SIZE SEDIMENTS	457
Introduction	457
A useful thought experiment	458
The bed-surface size distribution	458
Fractional transport rates	459
Gradation independence versus equal mobility	460
A thought experiment gradation independence versus equal mobility	462
Real data on fractional transport rates, from the flume and from the field	467
Movement threshold in mixed-size sediments	471
Deviations from the condition of equal mobility	477
More on sediment-discharge formulas	479
PART III CURRENT-GENERATED SEDIMENTARY STRUCTURES	
Chapter 15 DEPOSITION	483
Introduction	483
Modes of deposition	483
Why deposition or erosion?	491
A note on degradation	496
Chapter 16 CROSS STRATIFICATION	497
Stratification and cross stratification	497
The nature of cross stratification	498
Some general points about interpretation	499
The basic idea behind climbing-bed-form cross stratification	503
Important kinds of climbing-bed-form cross stratification	508
Cross stratification <i>not</i> produced by climbing bed forms	526
Chapter 17 PLANAR STRATIFICATION	531
Introduction	531
Features of planar lamination	533
The origin of planar lamination in sands and sandstones	533
Planar lamination in fine sediments	533
