

Contents

1. Preface	v
Chapter 1. Frequency Domain Formulation	1
1. Fourier Transforms and Delta Functions	1
2. Fourier Series and Time-Limited Functions	9
3. The Sampling Theorem	11
4. Discrete Observations	16
5. Aliasing	19
6. Discrete Fourier Analysis	20
7. Identities and Difference Equations	29
8. Circular Convolution	30
9. Fourier Series as Least-Squares	31
10. Stochastic Processes	32
11. Spectral Estimation	49
12. The Blackman-Tukey Method	53
13. Colored Processes	55
14. The Multitaper Idea	61
15. Spectral Peaks	62
16. Spectrograms	65
17. Effects of Timing Errors	66
18. Cross-Spectra and Coherence	66
19. Simulation	73
Chapter 2. Time Domain Methods	75
1. Representations-1	75
2. Geometric Interpretation	78
3. Representations-2	78
4. Spectral Estimation from ARMA Forms	81
5. Karhunen-Loève Theorem and Singular Spectrum Analysis	82
6. Wiener and Kalman Filters	83

7. Gauss-Markov Theorem	87
8. Trend Determination	90
9. EOFs, SVD	91
Chapter 3. Examples of Applications in Climate	97
1. References	98
