

2.674 “(Hands on) Micro- and Nano- Engineering Laboratories”

Sang-Gook Kim

Grand Challenges (ME in 10-15 years)

2.674 Teaching Staffs

3

- Instructors
 - Prof. Sang-Gook Kim
 - Prof. Jeehwan Kim
 - Dr. Benita Comeau,
 - Dr. Asmaa ElFaer
- Safety Instructor:
 - Daniel Herrick
- Teaching Assistant:
 - Mr. Andrew D Jones

Safety Lecture

4

- Safety
- Safety
- Safety

Safety Education Certificate

5

- EHS Chemical Hygiene Web Training certificate
 - Two weeks from today, 2/016/2016, by noon
 - e-mail to Benita
 - Already have a certificate ? Just email us a pdf copy.

Today's schedule

6

- Safety Lecture (dh)
- Course Outline (sk)
- Lecture-0: Why learn small things? (sk)
- Lab sections arrangement, Labs start next week

- 1 hour lecture
 - Just a brief introduction for each lab modules and related technology

- 3 hour lab
 - Lab manual will be handed out during lecture. (11 lab modules in 5 bindings)

- Lab Reports
 - Due at the lab one week after the module.
 - Submit a hard copy of a word processed document.

- Lab sections,
 - Thursday (A) 9-12 AM, (B) 1- 4 PM
 - Friday (C) 9-12 AM, (D) 1-4 PM

- Even distribution of lab sections will be beneficial to all of us.

- **Grading Points**

11 lab reports:	20 points each, 220 points total
Class and lab participation	30 points
Short Answer Quiz	50 points
Total	300 points

✓ Late submission of reports/assignments will lead to a 10% decrease in points per day.

✓ Instructors may fail students who miss any single laboratory session or fail to turn in a report.

- Three technology streams (in 11 lab modules)
 - Micromachining and MEMS fundamentals: material properties, fabrication technologies, basic structural mechanics, sensing and actuation principles.
 - Microfluidic fundamentals: design and fabrication of microfluidic devices, physics of pressure-driven, viscous, laminar flow, electrokinetic flow, thermo-fluid systems.
 - Nanomaterials: Self-assembly, CNT growth and observation, structural characterization techniques such as SEM, STM, AFM (and TEM).

Lab Overview

1 hr lecture, 3 hr lab, 2 hr report prep

Micromachining and MEMS fundamentals:

Benchtop photolithography

Microfluidic fundamentals :

Fun with molding

Nanomaterials and imaging

Droplets and Diffusion

Electrokinetic flows

Surface engineering with soft materials

Lab Overview

12

Micromachining and MEMS fundamentals:

Microfluidic fundamentals

Nanomaterials and imaging

Surface engineering with soft materials

Scanning electron microscope (SEM)†

Growing and touching carbon nanotubes

Micro 3D printing

Atomic Force Microscope

“Why learn small things”

Scales of things around us

- Human hair
 - Diameter
 - UTS
- Carbon Nanotube
 - Diameter
 - UTS
- Intel Dual Core Chip
 - How many transistors inside?
 - Critical line width

10^{26} meter Scale

The largest scale picture ever taken. Each of the 9325 points is a galaxy like ours. They dump together in 'superclusters' around great voids which can be 150 million light years across.

- The realm of molecules, DNA, proteins, and atoms.

Soccer ball and bucky ball (C60)

Buckyballs

- spherical fullerenes (C60 is most stable and symmetrical and resembles a soccer ball)
- named after architect R. Buckminster Fuller
- 1996 Nobel prize in Chemistry awarded for their discovery, R. Smalley, R. Curl, H.W. Kroto

The Scale of Things -- Nanometers and More
