

Basic neuroscience “crash course”

BMM summer school

8/15/15

Disclaimers

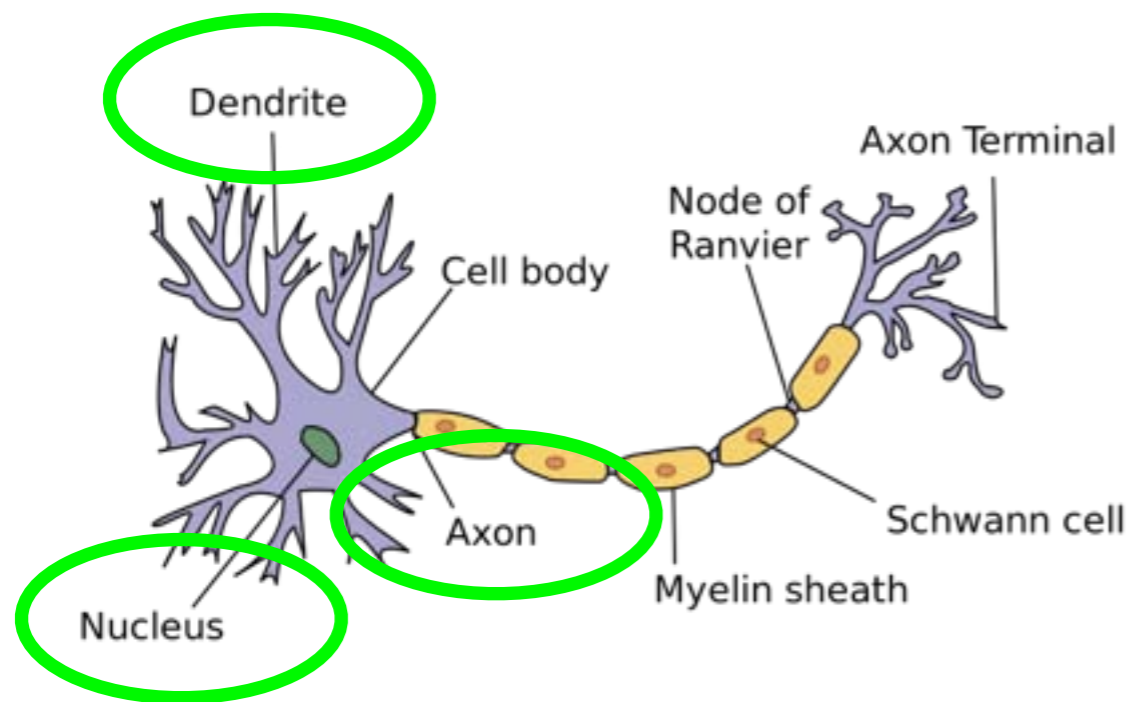

- Very basic
- CBMM/vision-centric

Outline

- Neurons
 - Resting potential (ion concentrations/channels)
 - Action potential & PSPs
- Basic brain anatomy
 - Inferior, superior, ventral, dorsal
 - Occipital, temporal, parietal, frontal lobes
 - Grey/white matter
- Neural recordings - EPhys, EEG/MEG, fMRI
- Visual system
 - Hierarchy: V1 \rightarrow IT
 - Receptive fields
 - Computational models

Neurons

- Soma (cell body), dendrites, axons
- Synapses

Neuron

- Ion channels and resting membrane potential
- Post-synaptic potential
- Action potentials
 - “Spiking”/firing

Invasive neural recordings

- Electrophysiology
 - Single unit (intra or extracellularly)
 - Multi-unit/local field potentials
- Electrocochography (ECoG)

Comparing neural recordings

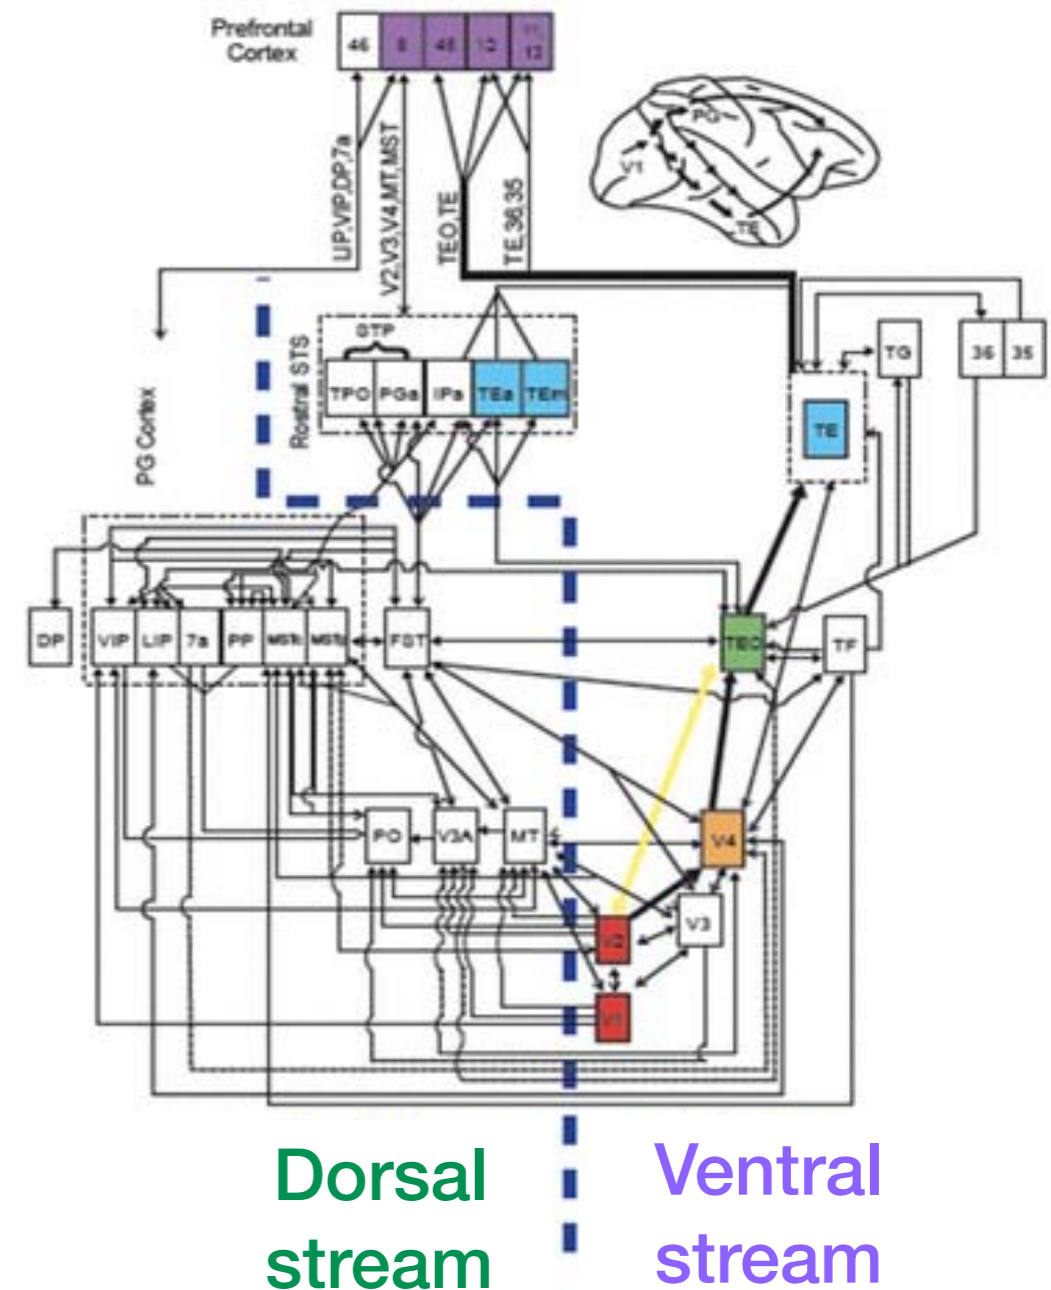

- Electrophysiology recordings - high spatiotemporal resolution, limited brain coverage
- fMRI - high spatial resolution data, broad coverage, low temporal resolution
- EEG/MEG - high temporal resolution, broad coverage, low spatial information

Visual processing in the human brain

- Ventral Stream - “What” Pathway
- Dorsal Stream - “Where” Pathway

Ventral visual processing stream

- Many layers organized in a hierarchy
- First layer: primary visual cortex (V1) - cells respond to oriented lines and edges
- Top layer: inferior temporal cortex (IT) - cells respond to entire objects and are both selective and invariant

Hierarchical feedforward models

- Inspired by Hubel and Wiesel's findings in visual cortex
 - HMAX (Serre 2007, Riesenhuber 1999), CNNs (Krizhevsky 2012)
- Simple cells - template matching, build selectivity
- Complex cells - pooling, build invariance
